

Results and Discussion

1. Revenue per acre was significantly influenced by phosphorus commercial fertilizer rate, turkey manure and NAF.
2. Phosphorus commercial fertilizer rates of 45, 60, 90 and 120 statistically influenced revenue per acre similarly.
3. Revenue per acre was influenced by NAF at rates of 500, 750 and 1000lbs per acre. These rates of NAF performed statistically similar and were statistically greater than 350 lbs. per acre.
4. Turkey Manure at 4 ton per acre gave statistically similar results compared to commercial phosphorus fertilizer at 45 lbs. per acre or greater and NAF at 500 lbs. or greater.
